#!/usr/bin/env python3
# -*- coding: utf-8 -*-
"""
Created on Thu Apr  9 17:28:06 2026

@author: flkc
Description:
    Load list of 10 Player Names and Batting Averages from a file into a dictionary. (Create your own
file with two items: player last name and batting average, i.e. 0.267, 0.300 etc, or use the file
you created in the earlier problem set). Write a function to print the dictionary contents in two
columns with a header for the name and average.
"""
