```python
#!/usr/bin/env python3
# -*- coding: utf-8 -*-
"""
Created on Wed Apr  8 22:44:38 2026

@author: flkc
Description :
    Load list of 10 Player Names and Batting Averages from a file into arrays, one of names and the
other of averages. Write a function to display the two arrays.

Write another function to search for the last name in the array and then display last name and
batting average when found. Then use a while loop in the main program to repeatedly ask the
user for a last name.
"""
